- 2. ISP**

Pinout:

General information :

Power outage: After a short power outage the display could freeze. To solve this problem, unplug the power supply at least 5 seconds.

Temperature: The alarm clock shows the approximate temperature.

Alarm: If you have pressed the alarm button and you enter the alarm mode, the display will not change when you turn the clock around.

Twisted cable: Avoid a twisted power cable, turn the alarm clock in the opposite direction.

WARNING:

Do not put any items into or on the clock. Protect your clock from water and any other liquids. Avoid damp rooms when you operate this device.

Use a suitable power supply unit (input voltage 9-12 volt and max. 1 ampere). Inappropriate voltage or polarity can cause permanent damage. We will not accept responsibility for any injury, harm or damage as result of operating this appliance.
